

COL-175-6-P-V-CBN-DW-ELV-230

The Column conveys order, symmetry and magnificence, much like the Grecian doric columns found in classical architecture. The faceted surface of the column mimics the fluting used on buildings and temples to create a sense of rhythm, which softly diffuses the light as it radiates into the space. As it can be arranged in segments of machine mould-blown glass cylinders, it can lengthen a space vertically or expand it horizontally.
